

## (Performance at altitude)

### Example altitude of 4,500 )

Current WX: at altitude 16c Altimeter 30.42

$$\begin{array}{r} 30.42 \\ -29.92 \\ \hline \end{array}$$

$= 5 \times 1,000 = 500.$  So **4,500** - **500** = **4,000**

**Pressure Altitude**
